

PROPRIETARY LIQUIDITY &amp; MARKET-STRUCTURE SYSTEM

# It reads the liquidity. You receive the signal.

A proprietary trading system whose entire robust edge — across 25 assets and 10 timeframes — lands in a single sector: semiconductors. **LIQUIDEX** is the engine that decides the trade; **Keeper** and **Prophet** make its reasoning and its risk visible. Invite-only on TradingView, delivered as alerts.

TRADES / TEST

# One brain. Two eyes.

One engine that decides — with two companions that make its reasoning visible. Not a catalog of indicators; one verdict.

## LIQUIDEX

THE BRAIN • decides the trade

### The strategy

5,000+ lines of Pine v6. Reads liquidation cascades, order flow, order blocks, iceberg walls and liquidity sweeps → one trade: entry, structural stop, take-profit at the opposing wall. The risk logic and the sector intelligence are built in.

## KEEPER

THE EYES • market

### Shows what's working

A companion indicator that runs the strategy across the equity universe and ranks every name live — by profit factor, momentum and risk. You see the leader the brain favours, not a hunch.

## PROPHET

THE EYES • risk

### Shows the risk

A companion indicator that makes the risk visible — a composite gauge, safe and danger zones, and a live position-size verdict that trims size when risk is elevated and stands you down in the danger zone.

## How the loop works

### 1 • FIND

Keeper surfaces the semiconductor that is working right now.

### 2 • DECIDE

LIQUIDEX sets entry, stop and target on that name.

### 3 • GATE

Prophet sizes the trade and breaks it in the danger zone.

# The edge has a name: **semiconductors**

This is not a lucky backtest. Out of 25 assets across 10 timeframes, **every one of the eight robust-core setups is a semiconductor** — the same sector, again and again. The concentration is the proof, not a coincidence.

profitable symbol/TF setups

## Why semiconductors

They are the most liquid, most institutionally-traded, most momentum- and cycle-driven group in the market — and they move as a cohesive sector. Those are exactly the conditions the liquidity engine is built to read: clean sweeps, real order flow, structure that repeats.

## Why that makes it credible

A system that "works on everything" is usually overfit. A system that works on a coherent, explainable sector — with 100–350 trades per test and drawdowns as low as 13% — is a real, repeatable edge. We do not claim to trade everything. We found where the edge actually lives.

TIER 1

## Semiconductors — the core edge

The robust, proven core — PF 1.5–2.8 with 100–350 trades. Every cell a semiconductor. ↑ marks setups improved by the Breaker-OFF re-test.

| Symbol | TF  | Profit Factor | Trades | Max DD        |
|--------|-----|---------------|--------|---------------|
| TSEM   | 1h  | 2.78          | 251    | ↑ Breaker-OFF |
| MU     | 5m  | 2.07          | 182    | ↑ Breaker-OFF |
| NVDA   | 4h  | 1.99          | 120    | 41%           |
| LRCX   | 4h  | 1.95          | 240    | ↑ Breaker-OFF |
| LRCX   | 10m | 1.89          | 203    | 16%           |
| AMAT ★ | 1h  | 1.79          | 241    | 13%           |
| ASML   | 1h  | 1.53          | 214    | 40%           |
| SMH    | 1D  | 1.53          | 189    | 54%           |

**The numbers are likely conservative.** A Breaker-OFF re-test improved **every setup re-run** — TSEM 1.68→2.78 · MU 1.58→2.07 · AVGO 0.89→1.47 · TSLA 1.25→1.63 · GOOGL 1.46→1.60 · AMAT 1.50→1.70. Best risk-adjusted core: **AMAT 1h** (1.79 · 13% DD), **LRCX 10m** (1.89 · 16% DD).

TIER 2

## Big Tech & Software

TIER 3

## High-Beta

Tier 2 — the second edge: mega-cap tech & software, strongest on the higher timeframes.

| Symbol | TF | PF   | Trades | Note                         |
|--------|----|------|--------|------------------------------|
| META   | 1W | 2.16 | 43     | mega-cap                     |
| GOOGL  | 1W | 2.12 | 33     | also robust on 1h (1.60)     |
| NICE   | 1W | 1.80 | 65     | +666% · software             |
| CHKP   | 1W | 1.46 | —      | cybersecurity                |
| MSFT   | 4h | 1.30 | 228    | robust anchor · also 1W 1.60 |

Tier 3 — the third edge: high-beta momentum. The largest returns, mostly small samples.

| Symbol | TF | PF   | PnL%   | Trades |
|--------|----|------|--------|--------|
| AVGO   | 1W | 5.62 | +669%  | 19     |
| TSLA   | 1W | 4.49 | +2141% | 16     |
| NVMI   | 1W | 3.02 | +420%  | 31     |
| TSLA   | 1h | 1.63 | +324%  | 337    |

The headline weekly numbers rest on small samples — tradeable only with Prophet's position caps. The robust exception is TSLA 1h (337 trades).

- 2 **Invite-only access is granted** — LIQUIDEX, Keeper and Prophet appear in your TradingView, ready for any chart. No install, no API keys.
- 3 **The signals reach you as alerts** — on your phone, your desktop, or wired into a trading bot.

LIQUIDEX FRAMEWORK · FULL ACCESS

**\$249**/mo

The LIQUIDEX strategy · the Keeper leaderboard · the Prophet risk gate · every validated Tier-1 & Tier-2 setup and its per-symbol settings.

Included for crypto: the Surge Guru scanner and Crypto Keeper, with the validated crypto names (ICP · WLD · ETH).

## BEYOND A SUBSCRIPTION

LIQUIDEX is not a single indicator. It is a complete trading system — a liquidity engine, a market-structure engine, a live scanner, a risk-management framework, and a ranking & confluence layer — built over thousands of development hours, with more than fifty independently verified profitable setups across semiconductors, technology, cyber, defense and pharma. The intellectual property is significant, and the work is ongoing. **The system is available for licensing, strategic partnership, or full acquisition.**
