

MULTI-ASSET LIQUIDITY &amp; MARKET-STRUCTURE FRAMEWORK

# One liquidity engine. Six asset classes.

One rule-based engine with a validated, low-drawdown edge across **six asset classes** — semiconductors, mega-cap tech, industrials, consumer, financials and macro ETFs — over **1,444+ trades**. **LIQUIDEX** decides the trade; **Keeper** and **Prophet** make its reasoning and its risk visible. It is no longer a stock strategy — it is a multi-asset framework. Invite-only on TradingView.

# One brain. Two eyes.

One engine that decides — with two companions that make its reasoning visible. Not a catalog of indicators; one verdict.

## LIQUIDEX

THE BRAIN · decides the trade

### The strategy

5,000+ lines of Pine v6. Reads liquidation cascades, order flow, order blocks, iceberg walls and liquidity sweeps → one trade: entry, structural stop, take-profit at the opposing wall. The risk logic and the sector intelligence are built in.

## KEEPER

THE EYES · market

### Shows what's working

A companion indicator that runs the strategy across the equity universe and ranks every name live — by profit factor, momentum and risk. You see the leader the brain favours, not a hunch.

## PROPHET

THE EYES · risk

### Shows the risk

A companion indicator that makes the risk visible — a composite gauge, safe and danger zones, and a live position-size verdict that trims size when risk is elevated and stands you down in the danger zone.

## How the loop works

### 1 · FIND

Keeper surfaces the name from the book that is working right now.

### 2 · DECIDE

Liquidex sets entry, stop and target on that name.

### 3 · GATE

Prophet sizes the trade and breaks it in the danger zone.

# It stopped being a stock strategy.

A week ago the story was three semiconductors. Today the same engine holds a validated, low-drawdown edge across **six unrelated asset classes** — semiconductors, mega-cap tech, industrials, consumer, financials and macro ETFs. The breaking point is the macro proof: it works on gold, the Nasdaq and long bonds.

**1.91**

GLD · gold · 13% DD

**1.77**

QQQ · Nasdaq · 12.9% DD

**1.42**

TLT · long bonds · 17% DD

## Why that makes it credible

An edge that lives in one sector is usually a curve-fit. An edge that repeats across six asset classes — including completely different instruments like GLD, QQQ and TLT — is reading something structural: institutional liquidity and market structure, wherever it appears. That is the difference between a product and a framework.

## And we're blunt about the misses

Energy, crypto-proxies, most high-beta growth and software all failed the safety bar — and so did the newer semis (KLAC, MCHP, SMCI). Every weekly profit factor is an anomaly on a tiny sample, never proof. The durable edge lives at 5m–4h, on a curated multi-asset book.

# Ten names. Four asset classes. Each with its recipe.

The recommended portfolio, sorted by safety — lowest drawdown first. Every name is profit factor  $\geq 1.6$  at  $\leq 19\%$  drawdown. Run each one exactly as listed — its timeframe, its breaker — and there's nothing else to tune.

| #  | Symbol | Class       | TF        | Brk | Profit Factor | Max DD | Trades |
|----|--------|-------------|-----------|-----|---------------|--------|--------|
| 1  | GOOGL  | Mega-tech   | 45m       | OFF | 2.30          | 6.1%   | 107    |
| 2  | MU     | Semis       | 5m        | OFF | 2.08          | 8.8%   | 103    |
| 3  | QQQ    | Macro ETF   | long-only | OFF | 1.77          | 12.9%  | 166    |
| 4  | AMAT   | Semis       | 1h        | ON  | 1.79          | 13.0%  | 241    |
| 5  | GLD    | Macro ETF   | 4h        | OFF | 1.91          | 13.0%  | 119    |
| 6  | LRCX   | Semis       | 10m       | ON  | 1.89          | 15.7%  | 203    |
| 7  | CAT    | Industrials | 1h        | OFF | 1.74          | 15.8%  | 126    |
| 8  | TSEM   | Semis       | 1h        | OFF | 2.78          | 16.5%  | 146    |
| 9  | WMT    | Consumer    | 4h        | OFF | 1.70          | 18.7%  | 181    |
| 10 | TSLA   | Mega-tech   | 1h        | OFF | 1.63          | 18.7%  | 337    |

Ten names · four asset classes · **every one PF  $\geq 1.6$  at  $\leq 19\%$  drawdown**, most over 100 trades. The book already spans equities, semis and macro ETFs (GLD, QQQ). Breaker ON only on AMAT & LRCX. **This is the safe core.**

## The framework keeps widening

A solid second tier extends the book into **financials** (BLK, AXP) and **macro** (TLT) — proof the edge keeps travelling. Drawdown 13–27%.

| Symbol | Class       | TF | Profit Factor | Max DD |
|--------|-------------|----|---------------|--------|
| ASML   | Semis       | 1h | 1.53          | 24.0%  |
| ISRG   | Healthcare  | 4h | 1.51          | 26.5%  |
| AXP    | Financials  | 4h | 1.46          | 20.9%  |
| TLT    | Macro ETF   | —  | 1.42          | 17.0%  |
| BLK    | Financials  | 3h | 1.42          | 18.0%  |
| CHTR   | Comms       | 1h | 1.37          | 13.4%  |
| GE     | Industrials | 2h | 1.28          | 25.0%  |

**Financials now travel with the engine** — BLK lifted 1.33 → 1.42 under LIQUIDEX, AXP and BRK.B confirm the class. **Anomalies, not proof:** DELL 1W 10.34 (23 trades), PANW 1W 6.08 (28), SNOW 1W 4.46 (14) — spectacular, tiny samples, excluded from the book. So is every standalone weekly.

### How to deploy each name

Set the chart to the symbol & timeframe. Set the breaker as the row lists. Leave everything else default — cascade off, no gates. Breaker ON only on AMAT, LRCX, ASML, NVDA, AXP; OFF everywhere else.

**The honest headline:** the book runs roughly **PF 1.6–2.8** at **6–19% drawdown** across six asset classes and 1,444+ trades. These are in-sample backtests; most trending names still trail buy-and-hold on raw return (AMAT daily is the exception). A disciplined, low-drawdown, multi-asset framework — not a money printer.

LIQUIDEX FRAMEWORK · FULL ACCESS

## Pricing on request

The LIQUIDEX strategy · the Keeper leaderboard · the Prophet risk gate · the full safe book and every per-symbol recipe (its timeframe, its breaker setting). **Message us on WhatsApp for current pricing & access.**

Included for crypto: the Surge Guru scanner and Crypto Keeper, with the validated crypto names (ICP · WLD · ETH).

### BEYOND A SUBSCRIPTION

LIQUIDEX is not a single indicator. It is a complete trading system — a liquidity engine, a market-structure engine, a live scanner, a risk-management framework, and a ranking & confluence layer — built over thousands of development hours and validated across nine sectors, with a robust, low-drawdown edge confirmed in mega-tech, semiconductors, industrials and consumer names. The intellectual property is significant, and the work is ongoing. **The system is available for licensing, strategic partnership, or full acquisition.**
