

MARKET-STRUCTURE & LIQUIDITY FRAMEWORK

A proven edge, concentrated in chips.

A proprietary quant framework whose entire robust edge — across 25 assets and 10 timeframes — lands in a single sector: semiconductors. Found live by **Keeper**, traded by **LIQUIDEX-CORE**, gated & circuit-broken by **Prophet**.

BEST ROBUST PF

100–350

TRADES / TEST

The edge has a name: **semiconductors**

This is not a lucky backtest. Out of 25 assets across 10 timeframes, **every one of the eight robust-core setups is a semiconductor** — the same sector, again and again. The concentration is the proof, not a coincidence.

Why semiconductors

They are the most liquid, most institutionally-traded, most momentum- and cycle-driven group in the market — and they move as a cohesive sector. Those are exactly the conditions the liquidity / cascade engine is built to read: clean sweeps, real order flow, structure that repeats.

Why that makes it credible

A system that "works on everything" is usually overfit. A system that works on a coherent, explainable sector — with 100–350 trades per test and drawdowns as low as 13% — is a real, repeatable edge. We don't claim to trade everything. We found where the edge actually lives.

Four products, one framework

One signal engine with tools wired into it. No catalog of indicators — one verdict.

LIQUIDEX-CORE

The signal engine

where to enter, stop & target

5,000+ lines of Pine v6. Liquidation cascades, CVD, order blocks, iceberg walls and sweeps → entries with structure stops and opposing-wall take-profits.

KEEPER

The EQ leaderboard

which semi is working now

Runs the strategy across equities and ranks every name live by profit factor, surge and risk. Includes Crypto Keeper as a bonus.

PROPHET

Risk gate + breaker

go / no-go & how big

Composite risk, SAFE / DANGER zones and velocity — with a live position-size verdict that trims size when risk is elevated and stands you down in the danger zone.

SURGE GURU

Crypto surge scanner

which crypto token is firing

A bonus for crypto lovers — real-time 1m + 3m explosiveness with multi-timeframe persistence. Crypto-only today; equities coming.

How the loop works

1 • FIND

Keeper surfaces the semiconductor that's working right now.

2 • TRADE

LIQUIDEX-CORE plots entry, stop and target on that name.

3 • GATE

Prophet scores risk, sizes the trade, and breaks it in the danger zone.

TIER 1

Semiconductors — the core edge

The proven, robust core — PF 1.5–2.8 with 100–350 trades. Every cell a semiconductor. ↑ marks setups improved by the Breaker-OFF re-test.

Symbol	TF	Profit Factor	Trades	Max DD
TSEM	1h	2.78	251	↑ Breaker-OFF
MU	5m	2.07	182	↑ Breaker-OFF
NVDA	4h	1.99	120	41%
LRCX	4h	1.95	240	↑ Breaker-OFF
LRCX	10m	1.89	203	16%
AMAT ★	1h	1.79	241	13%
ASML	1h	1.53	214	40%
SMH	1D	1.53	189	54%

 **The numbers are likely conservative.** A Breaker-OFF re-test improved **100% of setups re-run** — TSEM 1.68→2.78 · MU 1.58→2.07 · AVGO 0.89→1.47 · TSLA 1.25→1.63 · GOOGL 1.46→1.60 · AMAT 1.50→1.70. Best risk-adjusted core: **AMAT 1h** (1.79 · 13% DD), **LRCX 10m** (1.89 · 16% DD).

TIER 2

Big Tech & Software

TIER 3

High-Beta

Tier 2 — the second edge: mega-cap tech & software, strongest on the higher timeframes.

Symbol	TF	PF	Trades	Note
META	1W	2.16	43	mega-cap
GOOGL	1W	2.12	33	also robust on 1h (1.60)
NICE	1W	1.80	65	+666% · software
CHKP	1W	1.46	—	cybersecurity
MSFT	4h	1.30	228	robust anchor · also 1W 1.60

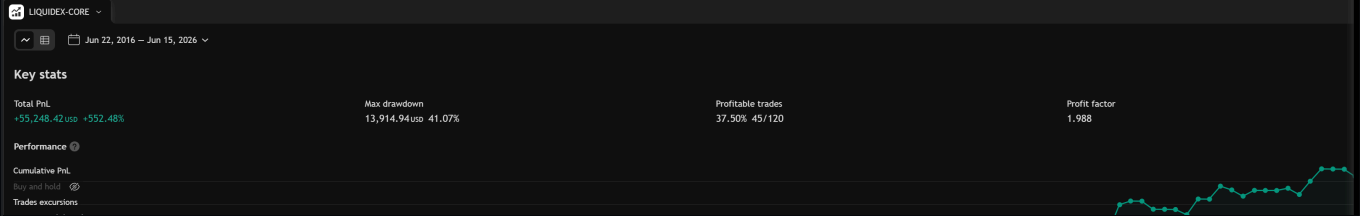

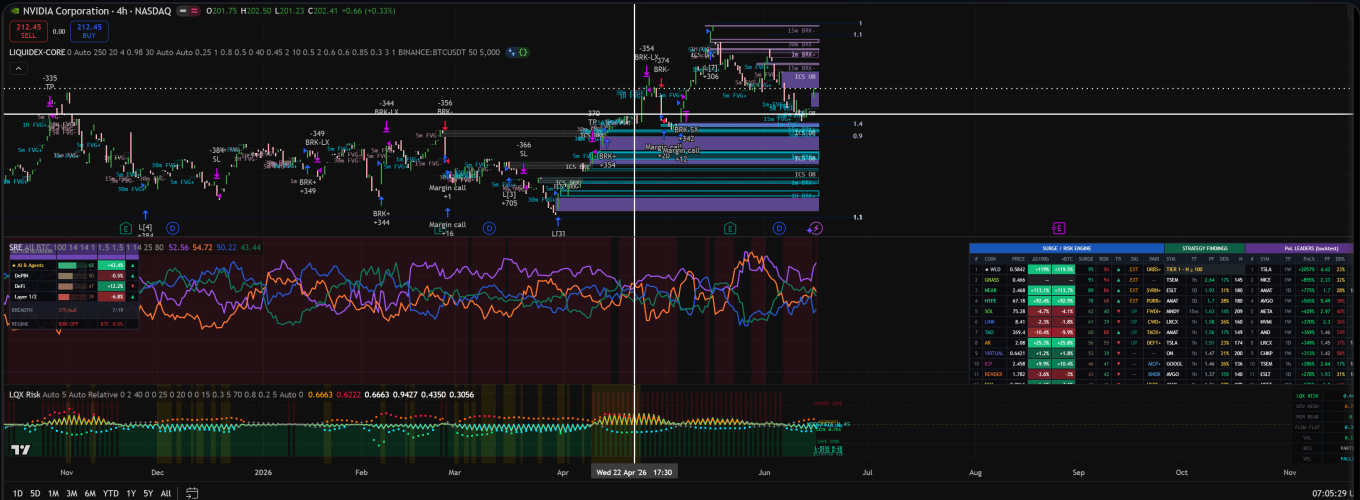

Tier 3 — the third edge: high-beta momentum. The biggest returns, mostly small samples.

Symbol	TF	PF	PnL%	Trades
AVGO	1W	5.62	+669%	19
TSLA	1W	4.49	+2141%	16
NVMI	1W	3.02	+420%	31
TSLA	1h	1.63	+324%	337

⚠ The headline weekly numbers ride on tiny samples — tradeable only with Prophet’s position caps. The robust exception is TSLA 1h (337 trades).
